

SKOS and the Ontogenesis of Vocabularies

Joseph T. Tennis

The University of British Columbia

Outline

- Purpose of Talk
- Definitions (Ontogenesis, Vocabularies, SKOS)
- SKOS and Ontogenesis
- Types of Ontogenesis
- Extending SKOS to express Ontogenesis

Purpose of the Talk

Purpose of the Talk

- Vocabularies change - they evolved through use, updating, management, etc.
- In the digital environment we wrap terms from vocabularies with resources.
- And we identify concepts with URIs.
- Those resources get stored, but we do not re-index those terms.

Purpose of the Talk

- Once assigned in vocabulary version 1.0 we do not re-index with version 2.0
- But we want to retrieve those documents that might be lost through vocabulary revision

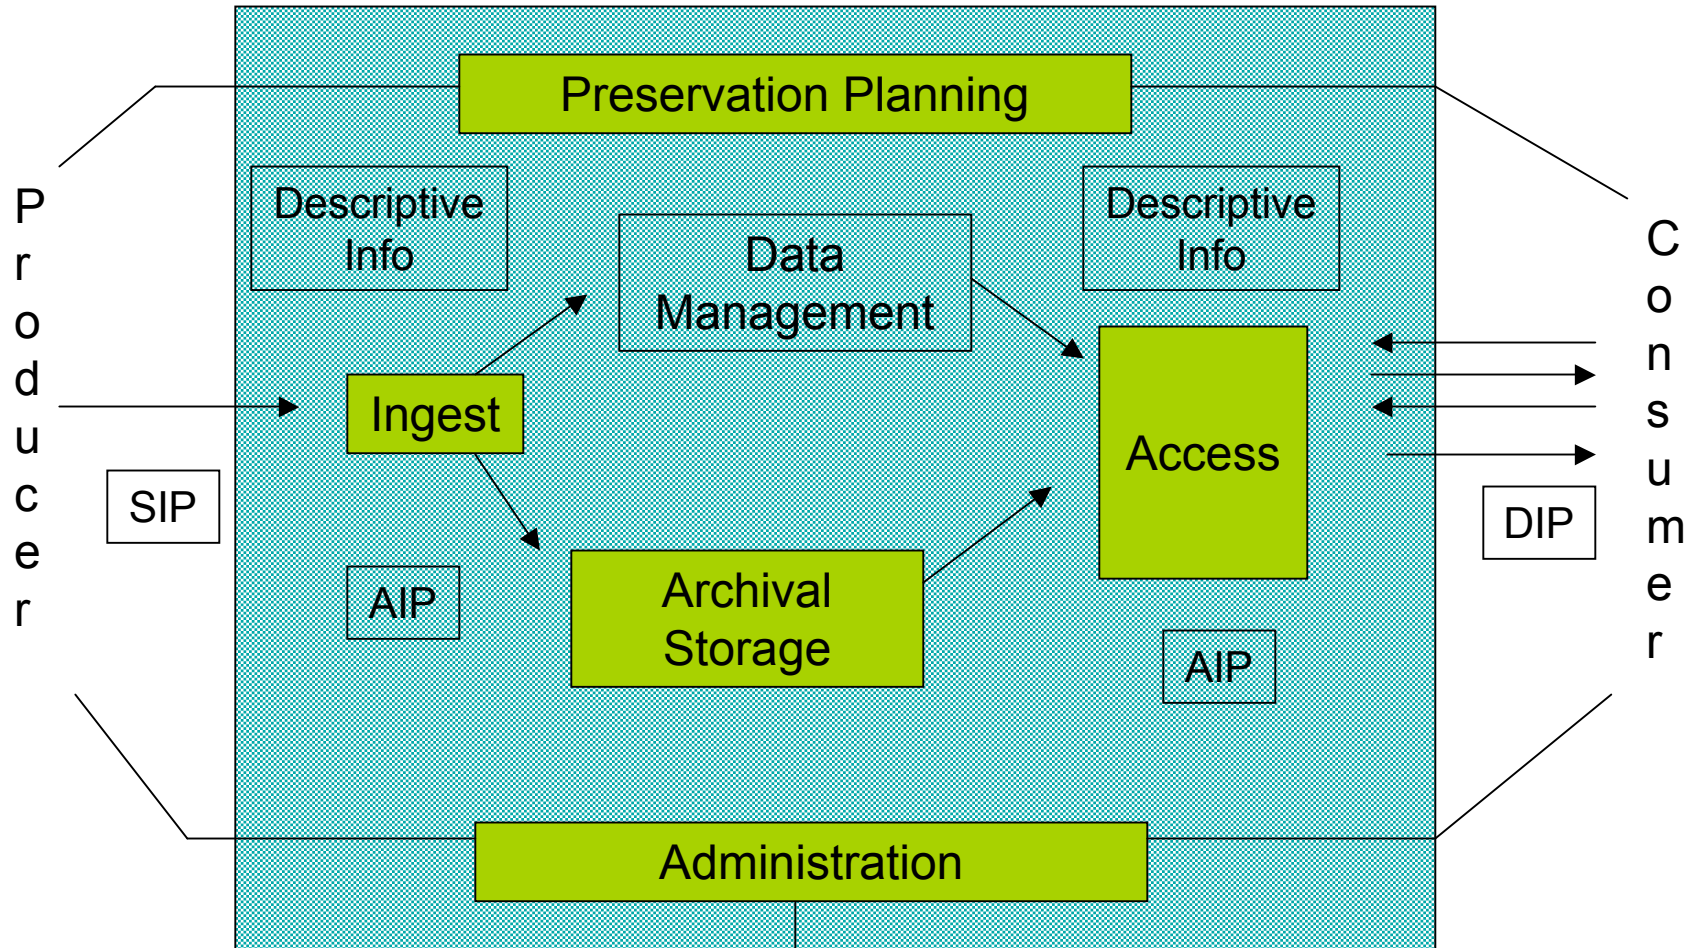

Purpose of the Talk

- For example, Yale University Library is archiving electronic journals using the Open Archival Information Systems (OAIS) Reference Model
- These ask for “information packages to store” and I’d like SKOS extensions like these provided here to be part of that...

Purpose of the Talk

Definitions

Ontogenesis, Vocabularies, and SKOS

Definitions

- SKOS
 - Simple Knowledge Organisation Systems [1]
- Vocabularies
 - Terms used (a) organize knowledge and (b)) to describe resources

Definitions

- Ontogenesis
 - Drawn from biology
 - In that context it means the development of an individual from conception through the full life-cycle
 - In a vocabulary context it means the development of the vocabulary through its lifetime

Definitions

- Ontogenesis of vocabularies maps the changes in a vocabulary as it moves from one version to another

SKOS and the Ontogenesis of Vocabularies

SKOS and Ontogenesis of Vocabularies

- I am providing here an extension to SKOS that helps map the ontogenesis of vocabularies
- `skos:changeNote` and `skos:historyNote` don't account, in the Guide, for formal traces between versions of vocabularies

SKOS and Ontogenesis of Vocabularies

- I want to start to make explicit and formal traces between changes in concepts from one version of a vocabulary to another

SKOS and Ontogenesis of Vocabularies

- I want talk about:
 - Lumping
 - Relationship Changes
 - Refining

Types of Ontogenesis

Types of Ontogenesis

- Using the DC Metadata Thesaurus
 - Changes from 2002 to 2003 [2,3]
- Writing this in Turtle [4]
 - skos:Concept “metadata applications”
- Lumping, Relationship Changes, and Refining

Types of Ontogenesis

- Lumping
 - Pulls together two concepts
- We want to keep track of the fact that they were different in 2002 (term list), and now they are the same in 2003 (thesaurus)

Types of Ontogenesis

- dc2002 Terms:
 - (a) metadata harvesting
 - (b) Open Archives Initiative
- dc2003 Metadata Thesaurus
 - (a) Open Archives Initiative Protocol for Metadata Harvesting

Types of Ontogenesis

- Lumping

dc2002

skos:Concept "metadata harvesting"

skos:Concept "Open Archives Initiative"

Types of Ontogenesis

- Lumping cont.

dc2003

- skos:ConceptLump "Open Archives Initiative Protocol for Metadata Harvesting"
- skos:ConceptLumpTrace "metadata harvesting"
- skos:ConceptLumpTrace "Open Archives Initiative"

Types of Ontogenesis

- Relationship Changes
 - When a term in a vocabulary moves from an **associative relationship** to a **hierarchical relationship** [5]
 - Associative = related in some way
 - Hierarchical = one term has a broader meaning and the other has a more narrow meaning

Types of Ontogenesis

- Relationship Changes cont.
- dc2002 Terms
 - (a) applications
 - (b) web services
- dc2003 Metadata Thesaurus
 - (a) Applications
NT Web Services

Types of Ontogenesis

- Relationship Changes cont.
- dc2003

skos:Concept "Web Services"

skos:wasRelated "Applications"

skos:narrower "Applications"

Types of Ontogenesis

- Refining
 - When a term is refined by the addition of another term in the new version of the vocabulary

Types of Ontogenesis

- Refining cont.
- dc2003 Metadata Thesaurus:
 - (a) Cultural Heritage
[no other concepts]
- dc2004 Metadata Thesaurus
 - (a) Cultural Heritage
NT Sekisui-zu

Types of Ontogenesis

- Refining cont.

skos: Concept "Cultural Heritage"

skos:ConceptRefinement "Sekisui-zu"

Extending SKOS to Express Ontogenesis

Extending SKOS to Express Ontogenesis

- These changes from dc2002 to dc2003 required these extensions:

skos:ConceptLump

skos:ConceptLumpTrace (2)

skos:wasRelated

[used with existing skos:narrower]

skos:ConceptRefinement

Thank you
